Re: Projects 74979 and 74978-NSF/ANSI Standard 61 - Authorized Registered Formulations for Orange Crush Paste Flux and Lead Free Solder

Dear Mr. Sabarese,

This letter serves to confirm that the above-mentioned products have completed testing and evaluation under 512661-03 and 512660-03. Based on successful completion of the testing, I have recommended your products Orange Crush Paste Flux and Lead Free Solder for addition to NSF Official Listing under NSF/ANSI Standard 61 certified in the size of 0.5 inch or greater.

Therefore, I have enclosed your Authorized Registered Formulations for Orange Crush Paste Flux and Lead Free Solder. Please note that this must be maintained at the production facility and made available to NSF Staff for review. This will bring projects 74979 and 74978 to closure bringing the combined project total to \$11,115. This includes the testing of both products, the toxicologist review time, project management, the initial audit fee and the 2004 annual listing fee.

Sometime in 2004 you will receive an unannounced audit where we will collect samples of Orange Crush Paste Flux and Lead Free Solder as detailed in your Authorized Registered Formulation under Audit Activities. You will receive an invoice for the 2004 audit in the next few weeks (before the audit takes place). When the testing of your 2004 annual samples is complete, you will be billed approximately \$5,700 at that time. You should receive a copy of your updated NSF Official Listing in one week. Please contact me if you have any questions.

Best regards

Julia Schmalbach
